

Real Results in Performance

REACH is the leader in innovative performance improvement solutions customised to match your exact situation. REACH's proven methodologies ensure your team performs optimally in every operation by creating broad ownership for performance. REACH identifies Operational Best Practices through data analysis and facilitates an accelerated learning curve ensuring success and sustainability of real results. Performance is measured against best historical and other meaningful benchmarks to identify new learnings.

Optimising Your Operations. Enhancing Your Potential.

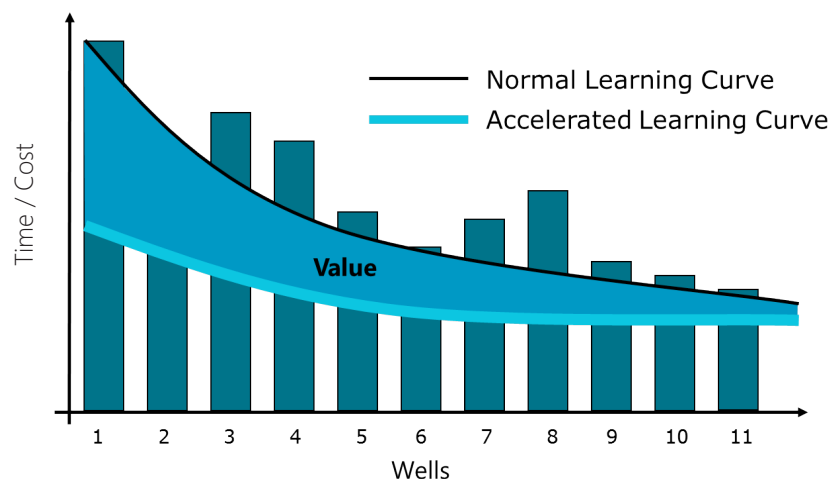

Are your operations reaching their full potential and staying under budget? REACH's Performance Optimisation program is designed to assist clients in exceeding their operational and financial targets by reducing drilling and completion inefficiencies. We coach your team on the tools and sustainable development necessary to achieve top quartile results and unlock the potential of your entire crew. REACH Performance Coaches in conjunction with your workforce utilise a combination of proven process, specialised software, leadership, knowledge management and performance metrics to facilitate change while positively impacting factors such as:

- Nonproductive time (NPT)
- Invisible lost time (ILT)
- Feet/metres per day
- Days per 3K/10K drilled
- Flat time operations
- Rig move times
- Realised value of "Lessons Learned"
- Cost under AFE
- Time under AFE
- Jobs Performed Right the First Time

The result is increased profitability and accelerated production schedule with reduced costs and a 15-30% improvement over and above the current well construction times.

REACH Performance Coaches accelerate the learning curve by ensuring that all prior learnings are integrated into the well program and by building ownership from day one of the operation. The value added through the REACH process ensures efficiency is maximised, risk is minimised and results are real.

The Value is in the Enhancement.

One Size Does Not Fit All.

Your organisation's operations, goals, challenges and people are unique. Your Performance Implementation Plan must be customised which is why we rarely apply the same approach to any two projects. REACH starts all projects with an Assessment to gain a full understanding of your business by listening to your people and studying your past performance. We compare your current planning, communications, measurement and learning systems to a World Class standard to pinpoint the areas where greatest benefit can be gained.

Using a Phased Approach.

Once we understand your business through the Assessment (Phase 1), REACH customises a detailed Implementation Plan (Phase 2: Planning and Enrollment) to transform your organisation from where you are to where you want to be by the quickest and most economical means possible. Workshops are utilised during this phase to communicate your needs and align your team on the goals for the program. REACH Coaches work in your office and/or work site during Implementation (Phase 3), coaching and supporting behaviours that will drive optimal performance. REACH designs sustainability (Phase 4) from day one; mentoring your long term champions for continued success after the Implementation is complete.

REACH applies the most appropriate Performance Optimisation methodology to your situation.

Represented below are the most often used methodologies:

- **Drilling the Technical Limit®** – For development programs, where organisational learning drives enhanced drilling curves. The Plan – Do – Measure – Learn process is balanced in this approach featuring planning, meeting and After Action Reviews for continuous improvement.
- **WellBore Manufacturing™** – Using multiple rigs in the same field with similar well designs, REACH analyzes well data to identify Operational Best Practice and get the right information to the right people at the right time.
- **Right First Time** – For one-off wells, exploration wells and completions. REACH's Right First Time approach to performance places the focus on proactively reducing operational risk with the broadest possible involvement of all stakeholders. A series of workshops and tools is used to identify risks that are linked to the actual execution of the work. The RFT performance approach places more emphasis in advance of your operation to reduce the probability of incidents and setbacks.
